

Applicant Name: Paul Jerome Balagtas

QA Technical Challenge:

Defects Found:

Defect [#001]: *Product Category page - Unable to select quantity of product before adding to cart.*

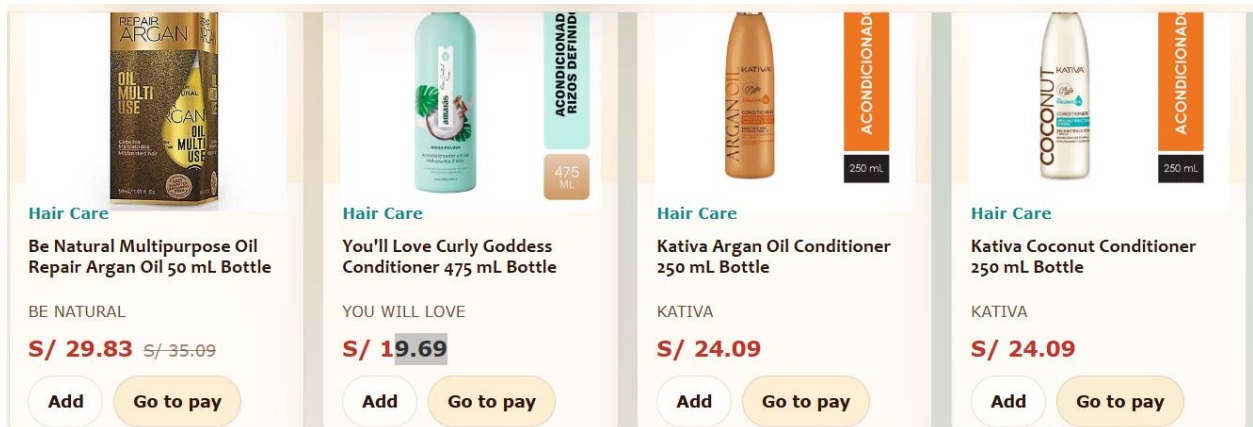

Description: When navigating through the product category page, user does not have an option to change the item quantity before adding it to the shopping cart.

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. Click on My Account Link
3. Log-in using a valid credential.
4. Click on Categories Link
5. Navigate to Haircare
6. Find and select an item to be added to the cart
7. Select quantity for the item

Expected Result: User was able to select a quantity before adding item to cart.

Actual Result: Select quantity was not available on each of the product listing.

Defect [#002]: *Home page – Product Search is not working properly.*

Description: User was unable to search existing items using the Product search field in the menu toolbar/header.

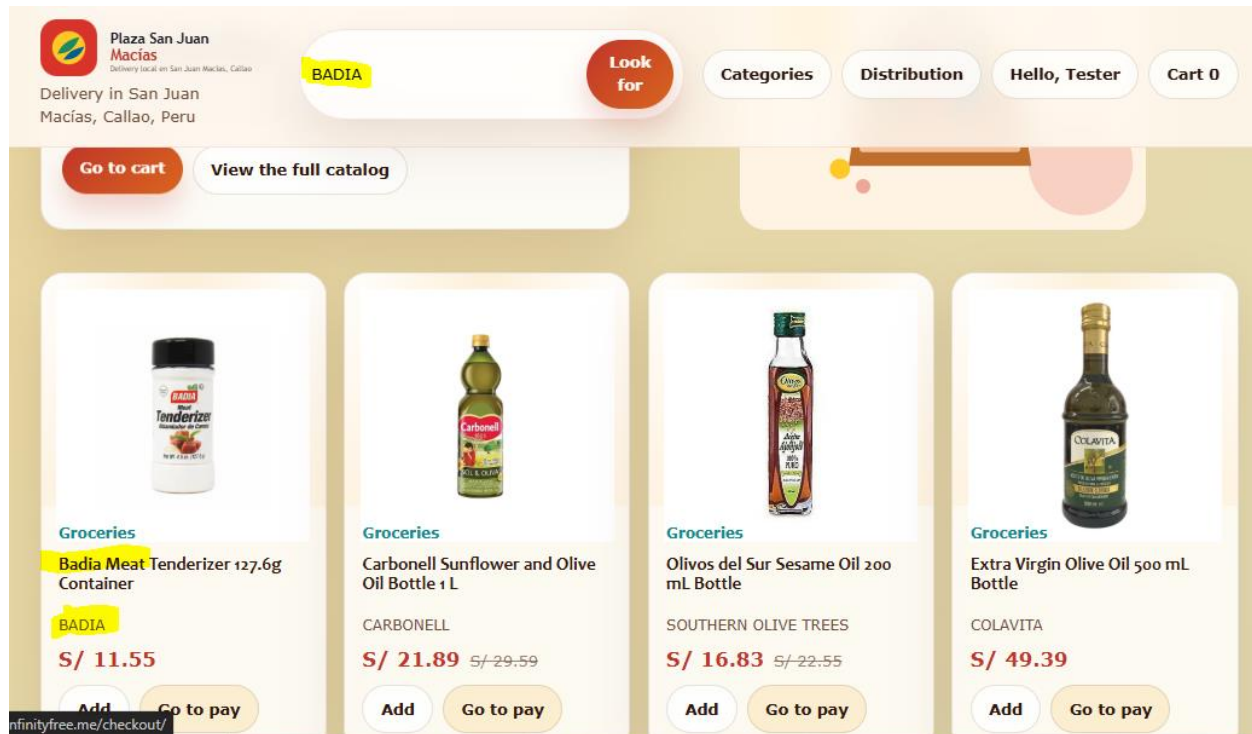

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. On the top of the screen, click on the Product Search field.

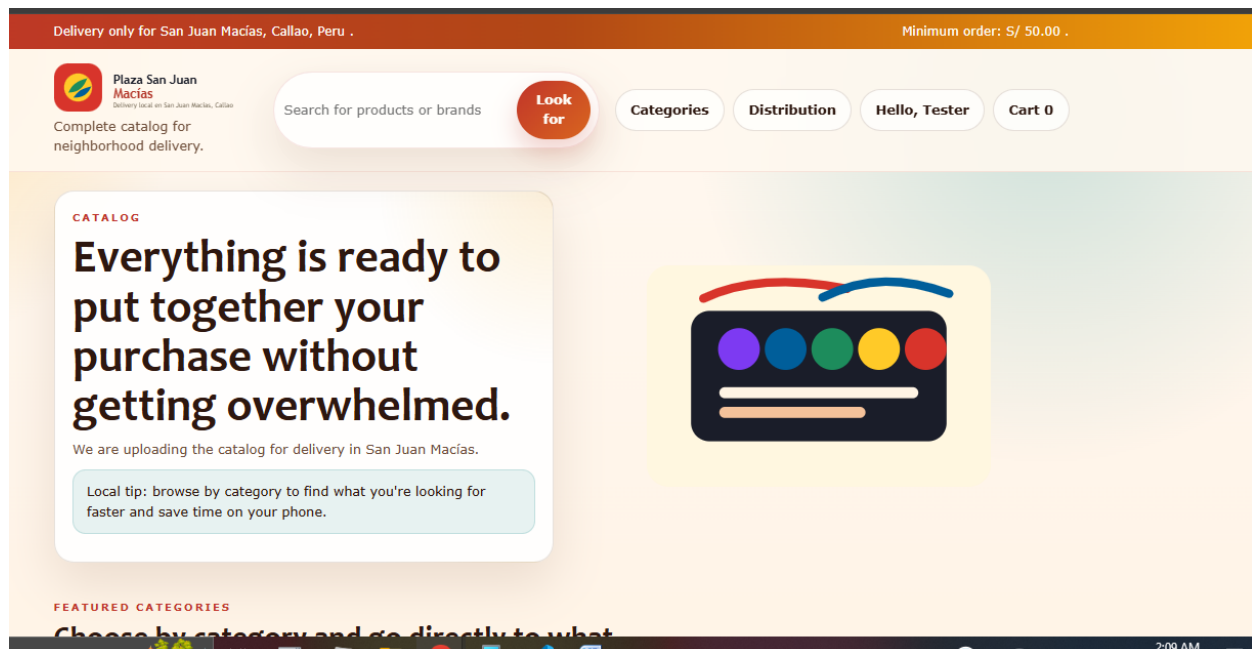

3. Input product brand name (i.e. BADIA, CARBONELL).
4. Click Look For button

Expected Result: User will be able to view the search results.

Actual Result: No search results were displayed. Item searched was verified existing.

No results were returned.

Defect [#003]: *Checkout Page – Unable to change the contents of the shopping cart.*

Description: When performing checkout in the shopping cart, user cannot alter the contents of the cart. User was unable to do the following:

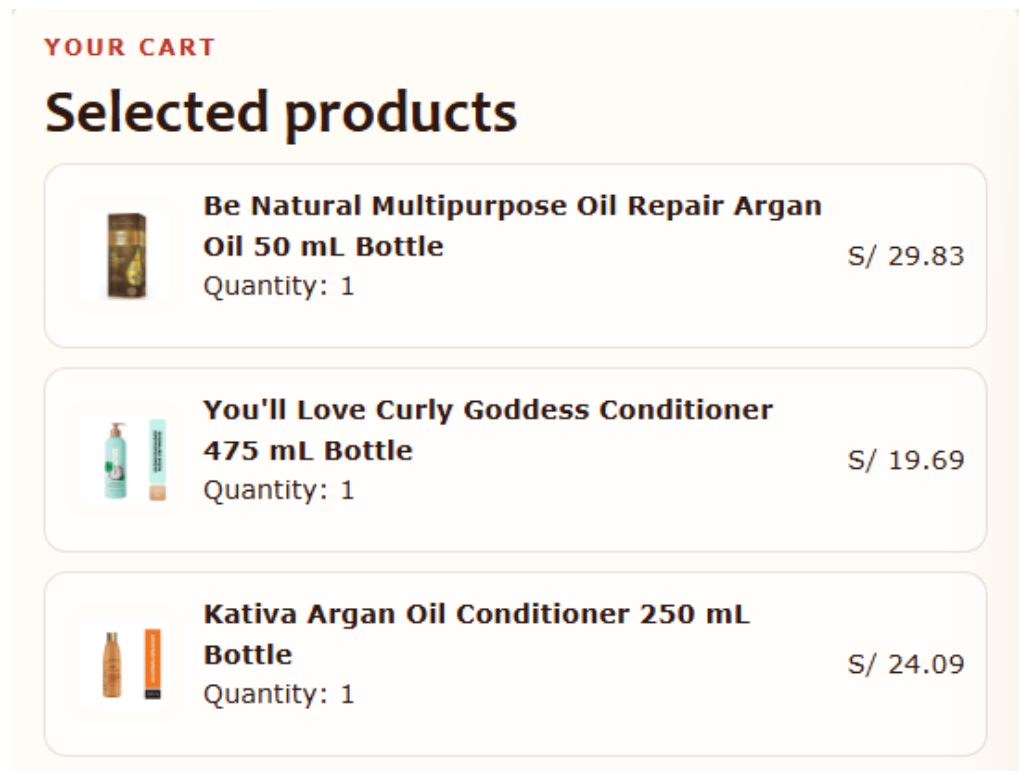

- Change item quantity
- Delete a selected item

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. Click on My Account Link
3. Log-in using a valid credential.
4. Click on Categories Link
5. Navigate to Haircare
6. Find and select an item to be added to the cart.
7. Select multiple items
8. Click on shopping cart link
9. Change the quantity or Delete an item in the cart

Expected Result: User was able to change the quantity or delete an item in the shopping cart prior to checkout.

Actual Result: User was unable to change the quantity or delete an item in the shopping cart prior to checkout. No options were visible for the said actions.

Defect [#004]: *Catalog Page – Catalog page is empty.*

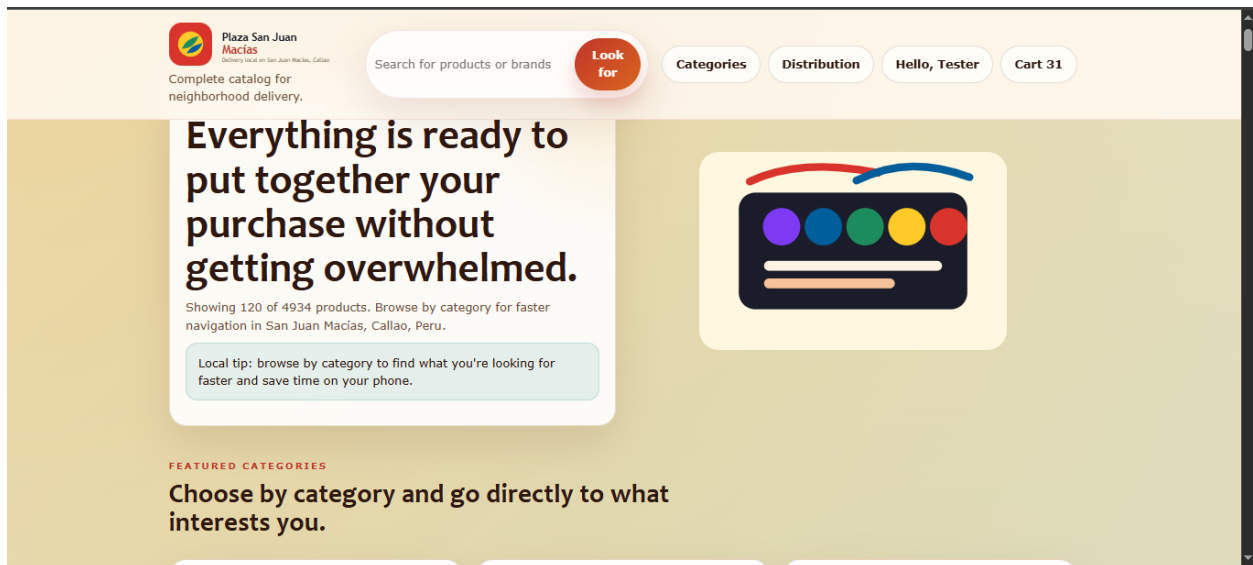

Description: Catalog page is empty. You would need to navigate instead to categories link to view the items to add to cart.

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. Click on Catalog Link

Expected Condition: Catalog Page was displayed and Items that can be added to the cart should be visible

Actual Condition: Catalog Page is empty. No products/items were displayed.

Defect [#005]: *My Account Page – Unable to view previous orders.*

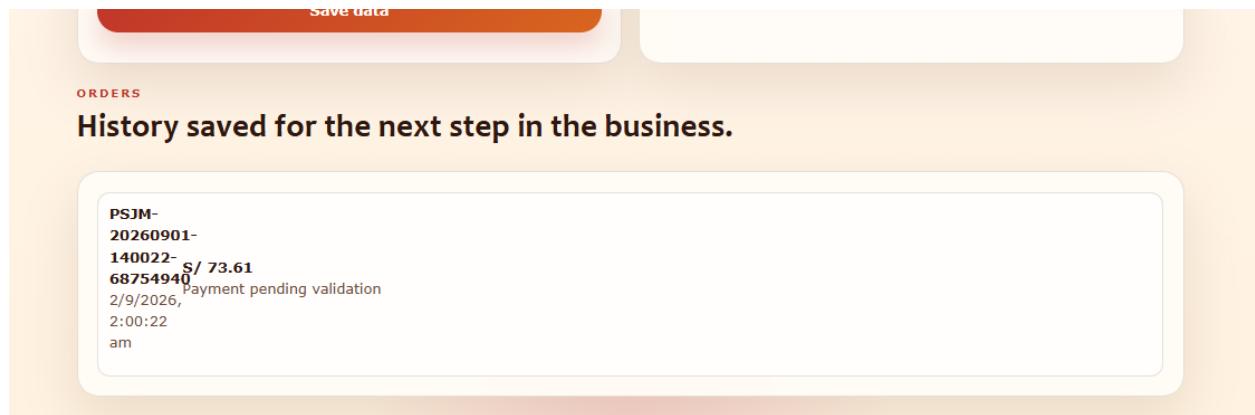

Description: User does not have a way to check the details of previous orders made in the website. Previous order is not clickable or does not provide enough information.

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. Click on My Account Link
3. Log-in using a valid credential.
4. Verify previous orders made.

Expected Condition: Previous order details can be accessed. Detailed information are presented for the selected order.

Actual Condition: : Previous order details cannot be accessed. User unable to view past order details.

Defect [#006]: *My Account Page – Unable to create a new account*

Description: Upon access of the shop website again, user was unable to create a new user account through the My Account page.

Steps to reproduce:

1. Navigate to the shop home page (<https://plazasanjuanmacias.infinityfree.me/>).
2. Click on My Account Link
3. Populate all required fields for new user account
 - a. Name
 - b. Email
 - c. Password
 - d. Confirm Password.
4. Click Create Account button.

Expected Condition: New user account should be created.

Actual Condition: : No new user account was created and user was not automatically logged into the shop.

Suggested High Level Test Scenarios and Steps for the Checkout Flow:

1. Happy Path – Select a product and proceed to Checkout.
 - Verify if the product was added in the checkout.
 - Populate all required fields
 - Select Payment option (Yape)
 - Proceed with Registration of Order
 - Order registration should be successful

2. Modify Order – Add a product to an existing cart/order then proceed with checkout.
 - Add initial product to cart
 - Go to checkout and verify product was added.
 - Navigate back to categories or search for product.
 - Add to cart another product
 - Go to checkout and verify product was added.
 - Populate all required fields
 - Select Payment option (BCP)
 - Proceed with Registration of Order
 - Order registration should be successful
3. Modify Order – Add a product with multiple quantity proceed to checkout then change quantity before registering order.
 - Verify if the product was added in the checkout.
 - Change Product quantity (add or lessen).
 - Populate all required fields
 - Select Payment option (Paypal)
 - Proceed with Registration of Order
 - Order registration should be successful
4. Modify Order – Add multiple products and proceed to checkout then remove a product before registering order.
 - Verify if the products was added in the checkout.
 - Remove one product from checkout basket
 - Populate all required fields
 - Select Payment option (BEP20)
 - Proceed with Registration of Order
 - Order registration should be successful
5. Negative Test - Select a product and proceed to Checkout without populating address fields.
 - Verify if the product was added in the checkout.
 - Leave all address fields as blank
 - Select Payment option (Yape)
 - Proceed with Registration of Order
 - Verify if order registration pushes through (Expected not to continue)

*** Tests were designed to test all 4 payment methods spread across different test scenarios.*

Critique this AI-generated test plan for the same checkout flow. Tell us what is unverifiable as written, what is invented with no basis, what is missing, and which line you would flag as the single most dangerous one.

○ The plan we were given:

- Verify the user can complete a purchase. – Verifiable.
- Verify all form validations work correctly. - Verifiable
- Verify the site is fully responsive on all devices. – Verifiable but need more context as to what “all devices” are and more specific on the definition of “responsive”.
- Verify payment completes within 2 seconds for all methods. – Unverifiable as there are a lot of external factor for the performance of this since payment is 3rd party. Suggestion to test if payment is successful instead.
- Verify the cart persists for 30 days. – This is unverifiable since the test duration very long. The team cannot make this test in progress for such time.
- Verify the system handles 5,000 concurrent checkouts. – Verifiable but would need significant amount of resources (virtual machines etc.) to perform.
- Verify the confirmation email is delivered instantly. – Unverifiable as for the “speed” the email is received as there is no basis for this. However email generation and receipt can be verified as functionality.
- Perform full regression across the whole site. – This is vague what would be the coverage of the regression. Need more specific scope for the regression suite.
- This plan provides complete coverage. – This is a red flag. The provided test plan does not cover all the functionalities to provide 100% coverage. It is very dangerous to assume to have complete coverage with such very little number of tests.
